Overview

PSE XTS has fulfilled dedicated environments to serve its purpose. Part of the requirements is to be able to deliver the static data files to subscribers such as brokers, vendors and investors.

PSE, currently, has FTP server dedicated to delivering subscribed files to the external clients. PSE takes advantage of the FTP server for this purpose.

To facilitate access to the file, PSE has implemented a file transfer access in such a way that subscribers (brokers, data vendors, or otherwise) can access the data from different environments.

Below are the details on how to access the static data file, depending on the environment.

1. EUA / UAT Environment
FTP Server : <ftp.pse.com.ph> (222.127.103.41)
Username : sdf EUA
Passsword : sdfEUA3D4F5G
Generation Time : 23:00:00 daily
2. FUNCTIONAL / CERTIFICATION Environment
FTP Server : <ftp.pse.com.ph> (222.127.103.41)
Username : sdfEUAvm2
Passsword : sdfEUAvm23D8W2K
Generation Time : 23:00:00 daily
3. PRODUCTION Environment
FTP Server : <ftp.pse.com.ph> (222.127.103.41)
Generation Time : 19:00:00 daily

Note: For access on PRODUCTION Environment, Market Data Business Department will provide the account details separately.
